College of Life Sciences and Agriculture

# The Integrated Pest Management Approach for Plant Health

**IPM is a science-based decision-making process that combines several tools...**

biological

cultural

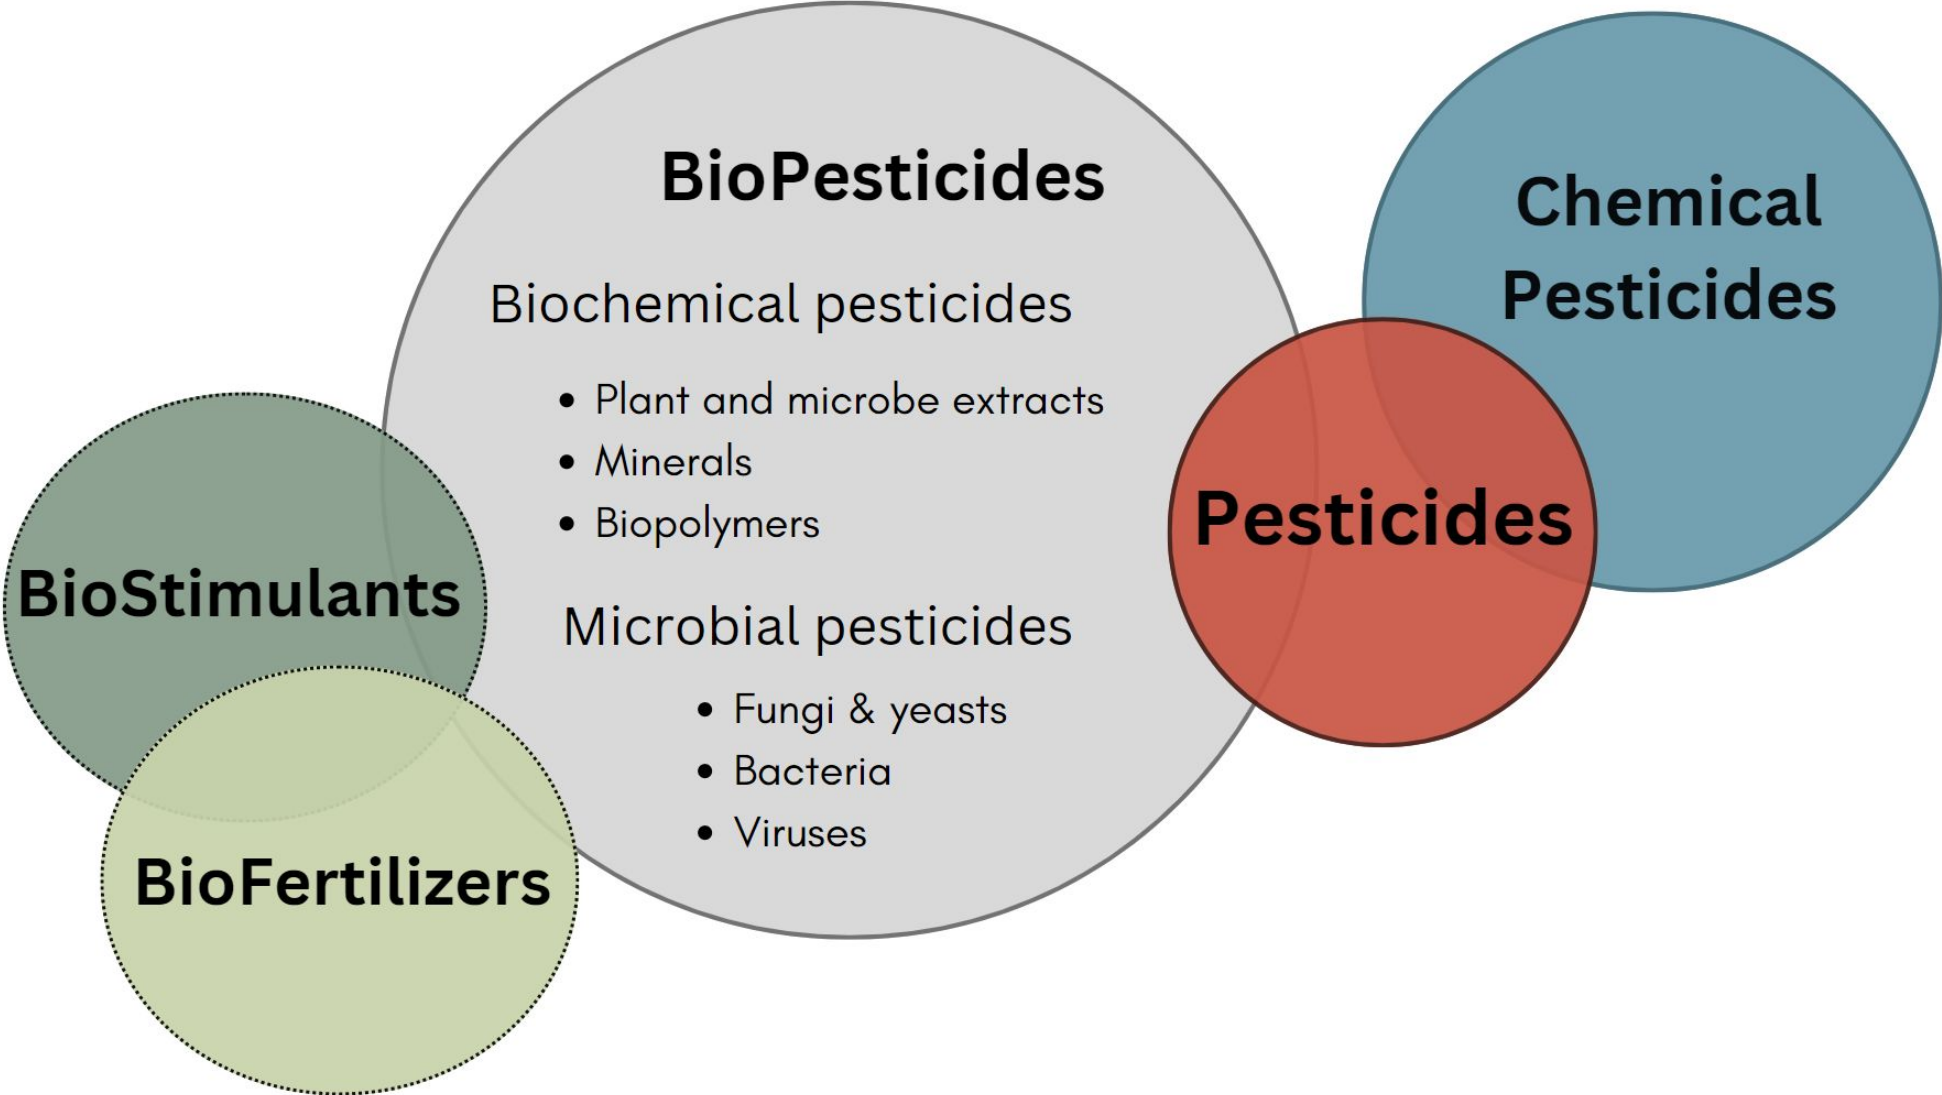

physical

chemical

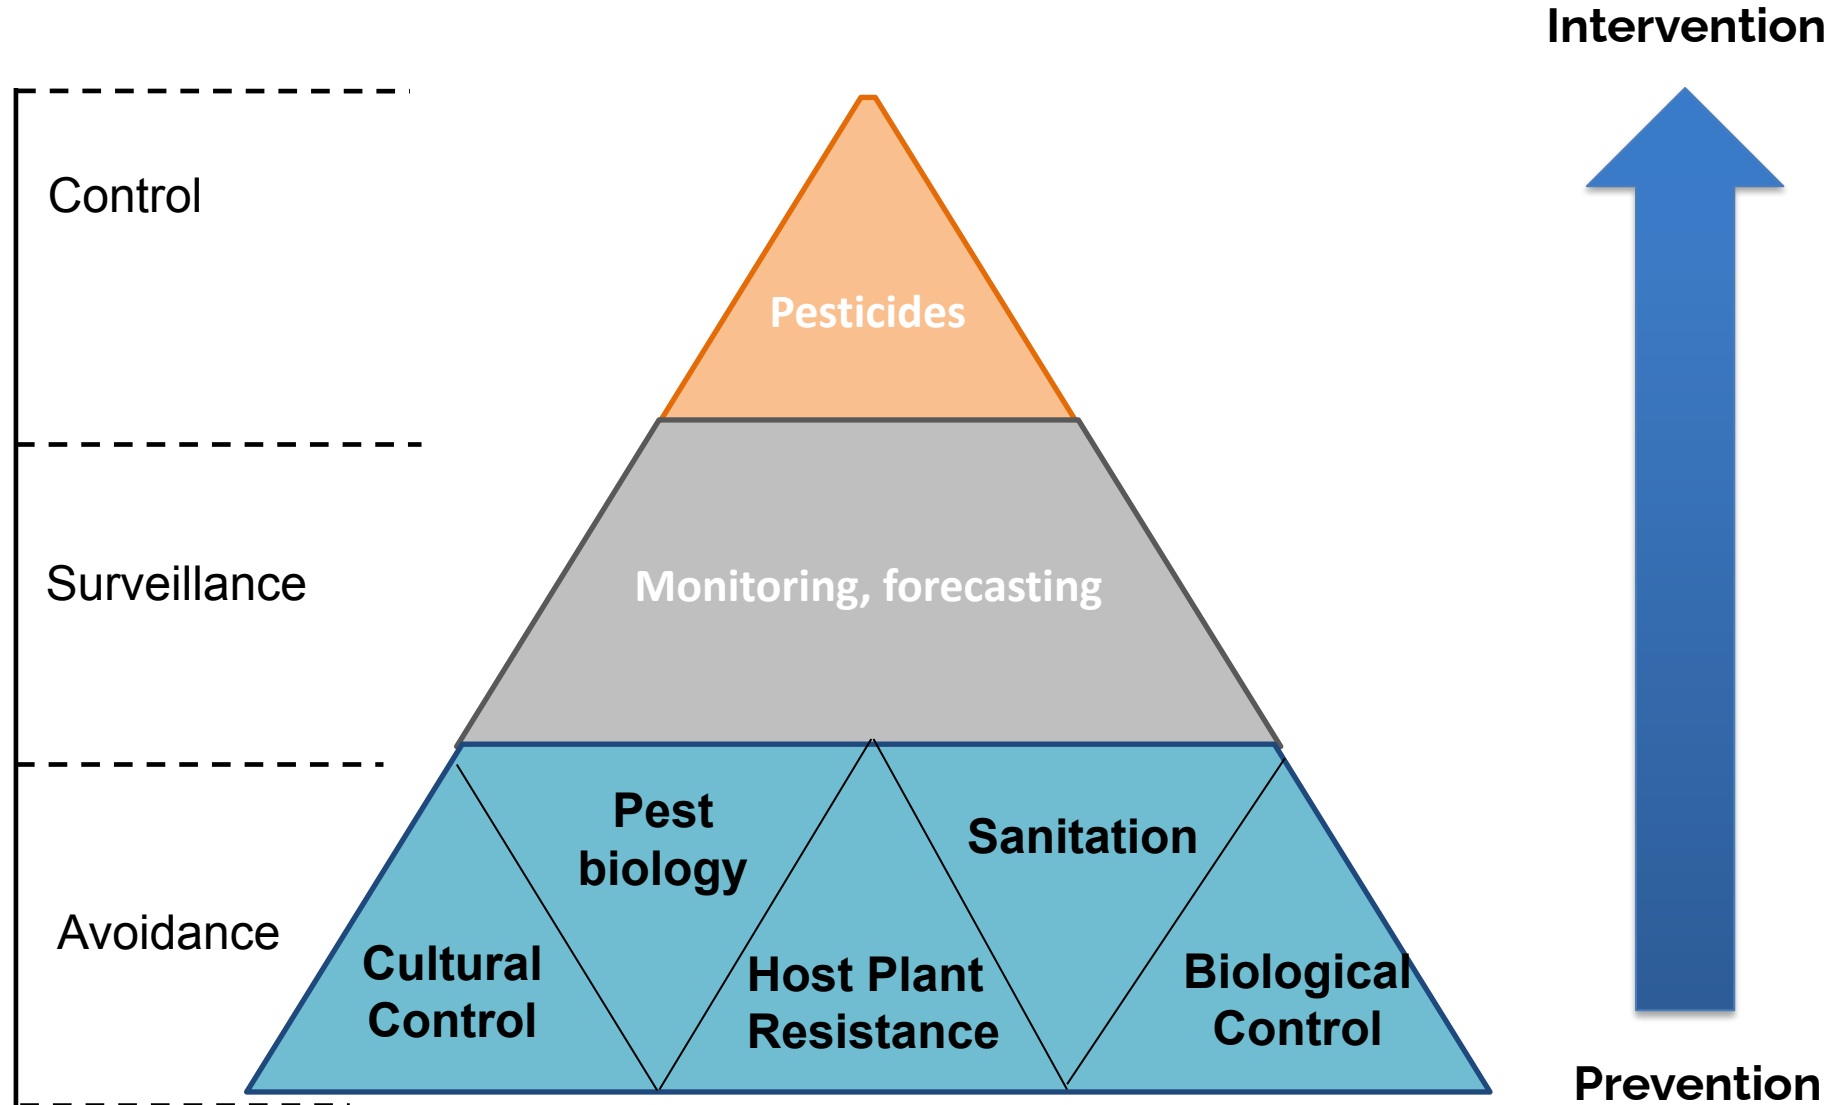

**to manage and reduce risk from pests/pathogens in a way that  
minimizes economic, health, and environmental risk.**

Minimize pesticide resistance!

# The IPM toolbox – hammers and nails

# Biologically based strategies are important IPM tools

# Biopesticides

Microbial  
metabolites

Microbes

Plant extracts

Natural  
compounds

# Chitin is one of the most abundant polymers on earth

Chitosan is synthetically made from chitin

# Chitosan is used for many industrial applications

Pharmaceuticals

Cosmetics

Water treatment

Textiles

Food preservation

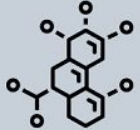

Agriculture

# Use of chitosan in crop protection

Chitosan is component of all insect & crustacean exoskeletons and the cell walls of fungi

-  Induces plant defense responses
-  Direct inhibition of fungal growth
-  Stimulates production of anti-microbial enzymes by microbes
-  Food source for biocontrol microbes

Benefits of using chitosan

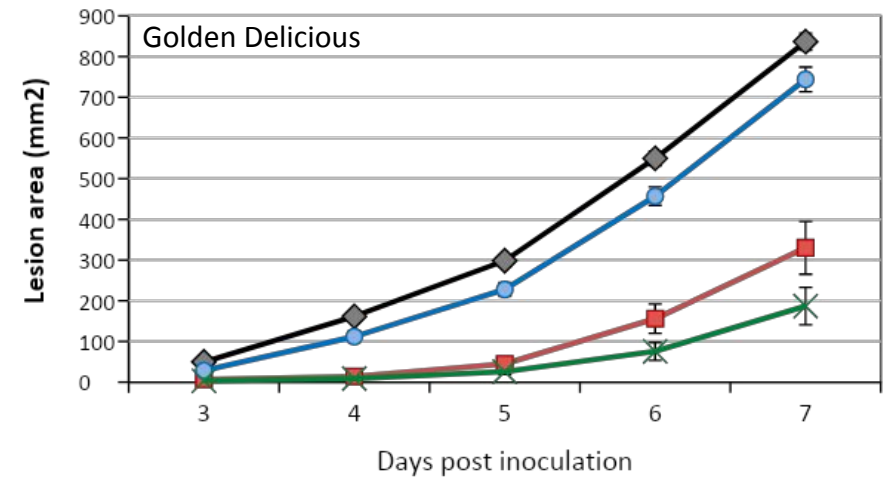

**Chitosan can reduce postharvest rots and extend shelf life**

# Chitosan research at UNH...a long time in the making

Chitosan reduced postharvest disease in preliminary experiments conducted in 2010 and showed potential to enhance biocontrol agent efficacy

## Why the gap from 2010 to 2020?

# Chitosan research at UNH

When applied to leaves chitosan can reduce severity of *Botrytis* gray mold on petunia

# Can the seafood byproduct chitosan help suppress disease in the orchard?

1. Examine the efficacy of foliar application of chitosan to reduce severity of apple scab and summer rot diseases
2. Investigate the potential to improve biopesticide efficacy in reducing apples diseases through co-application with chitosan

# Chitosan products evaluated

From the Ocean,  
For the Ocean.

# UNH-Penn State Research Project

Research was conducted at the Penn State Fruit Research and Extension Center 2020-2022

Treatment	Trade Name ( <i>Active Ingredient</i> )	Rate (per acre)	Timing <sup>1</sup>
Water Control	Water	--	TC-10C
Grower Standard	Manzate Pro-Stick ( <i>Mancozeb</i> )	1361 g (3 lb)	TC-1C
	Captan Gold ( <i>Captan</i> )	1134 g g (2.5 lb)	TC, 2C-10C
	Luna Sensation ( <i>Fluopyram and Trifloxystrobin</i> )	184 mL (5 fl oz)	P, FB
	Inspire Super ( <i>Difenoconazole and Cyprodinil</i> )	355 mL (12 fl oz)	PF, 1C
	LI 700 ( <i>Penetrant</i> )	473 mL (1 pint)	2C-10C
Chitosan	Tidal Grow ( <i>2% Chitosan</i> )	473 mL	TC-10C
Reduced Risk	Microthiol Disperss ( <i>Sulfur 80%</i> )	4536 g (10 lb)	TC-PF
	Serenade ASO ( <i>Bacillus subtilis</i> strain QST 713)	3785 mL (4 qt)	1C-10C
Reduced Risk + Chitosan	Microthiol Disperss ( <i>Sulfur 80%</i> )	4536 g (10 lb)	TC-PF
	Serenade ASO ( <i>Bacillus subtilis</i> strain QST 713)	3785 mL (4 qt)	1C-10C
Chitosan	Tidal Grow ( <i>2% Chitosan</i> )	473 mL	TC-10C

# Chitosan and overwintering ascospores

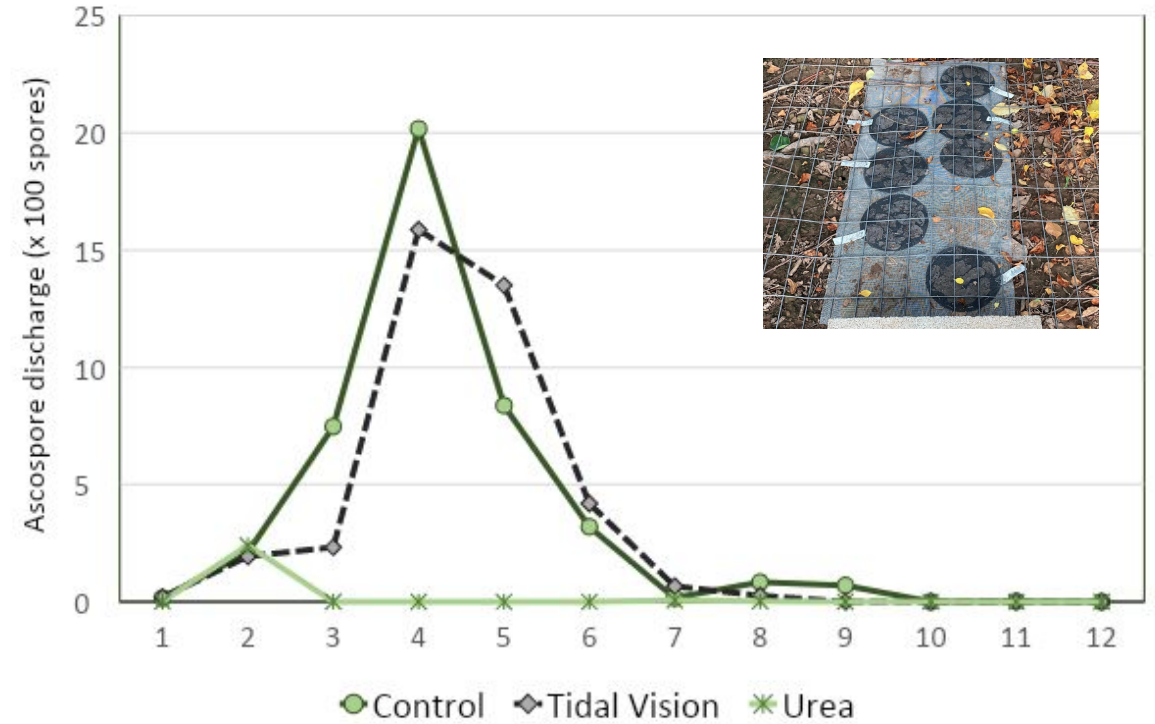

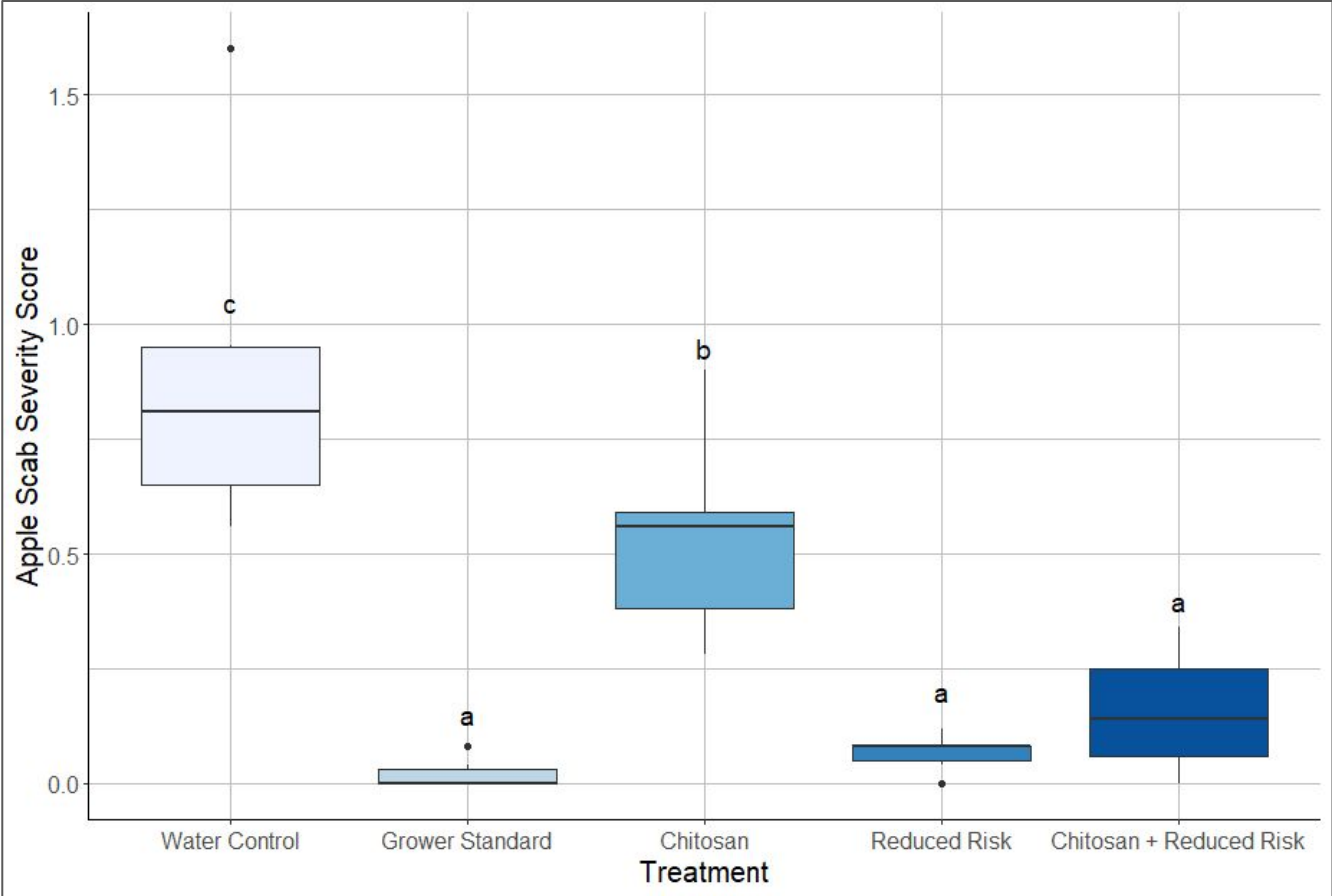

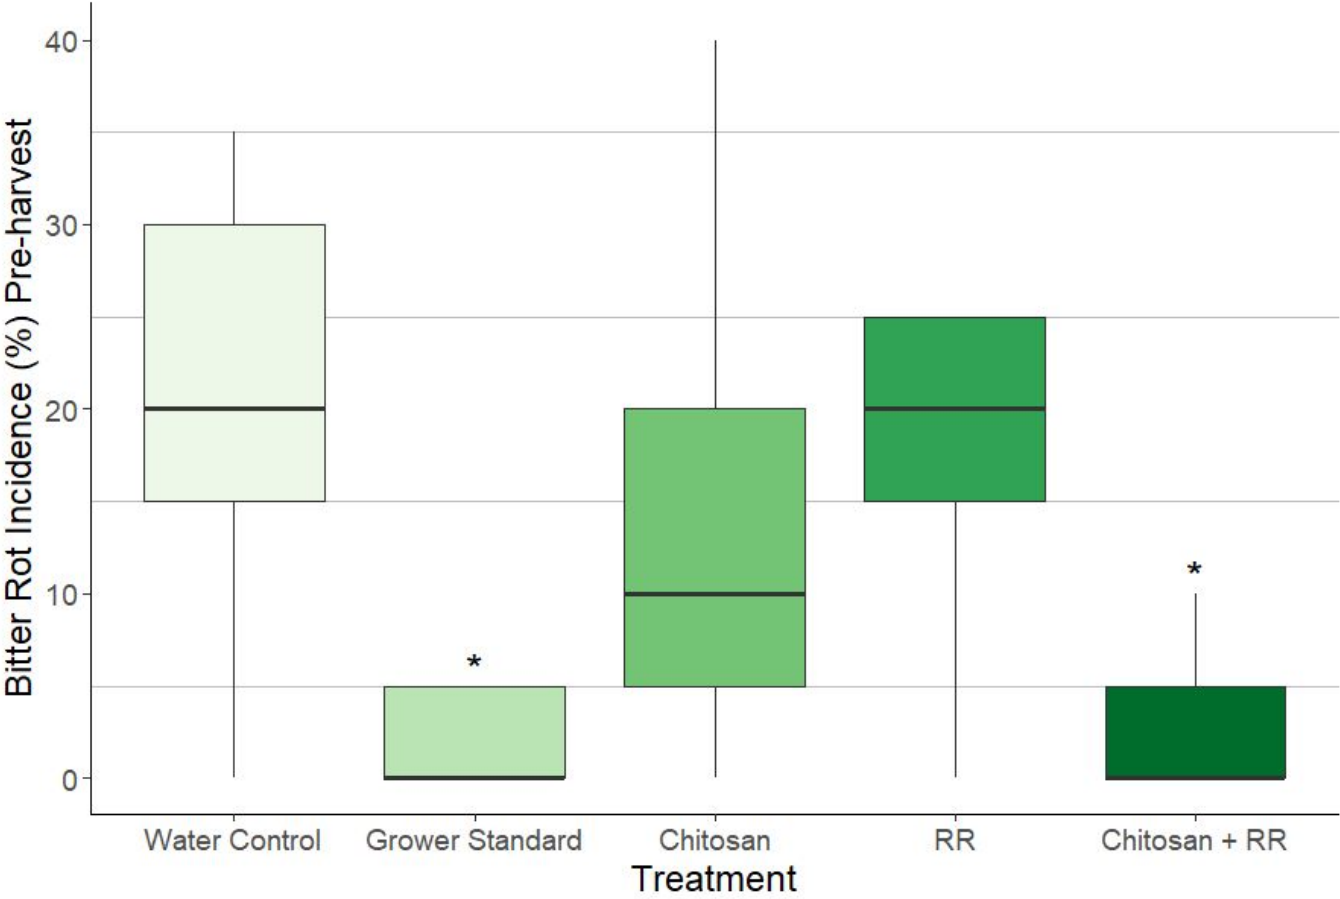

Illustration from Fungal Biodiversity edited by Crous, Verkley, Groenewald, & Houbraken

# Chitosan and the chitosan + biopesticide treatments reduced severity of foliar scab and fruit scab

# Chitosan + biopesticide reduced incidence of latent bitter rot

# Chitosan reduced severity of postharvest rots

Bitter rot (*Colletotrichum fioriniae*)

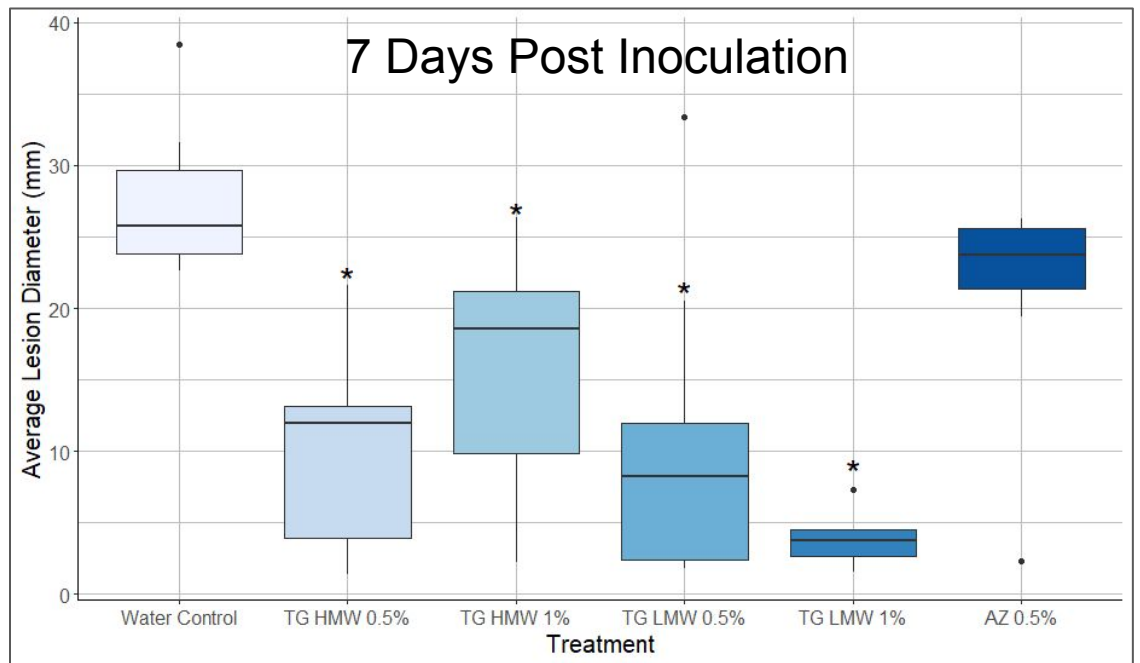

Water Control

Tidal Grow LMW 1%

# Chitosan reduced severity of postharvest rots

Blue mold (*Penicillium expansum*)

Water Control

Tidal Grow LMW 0.5%

Tidal Grow LMW 1%
