

Haskap Production Basics: Unlocking the Potential

Evan Elford, OMAFA New Crop Development Specialist
2024 NEVFC, Manchester, New Hampshire, USA

Overview

- Species Background
- General Use / Marketing
- Agronomics
 1. Establishment
 2. Ongoing Seasonal Management

Haskap (*Lonicera caerulea* L)

Family: Honeysuckle Family

Native Range: Boreal forest zone

Uses: Culinary/Ornamental

Life cycle: Perennial

Reproduction & Propagation:

- Monoecious
- Pollinizer plant required
- Insect pollinated
- Early flowering
- Vegetative propagation

Plant Hardiness Zone: 1 (survives but does it thrive?)

Ontario Production: Largest acreage of non-traditional berry crops in Ontario; suitable for northern and southern Ontario

Why Haskap?

- Diversification in colder plant hardiness zones

- Season extension (June-bearing strawberries)

- Unique flavour & colour (flesh/juice); health benefits

- Fresh, Frozen, Processed

Value-adding Opportunities

- Diversify products for customer base
- Increase farm income
- Health Benefits
 - H-ORAC values (higher than black currant, cranberry, and wild blueberry)
 - Anthocyanin values (higher than Saskatoons, wild blueberry, cranberry)

Metro Richelieu Inc 2024

2024 Plaid Shirt Farms Ltd

But...

- Limited agronomic information
- Limited name recognition by consumers
- No established market

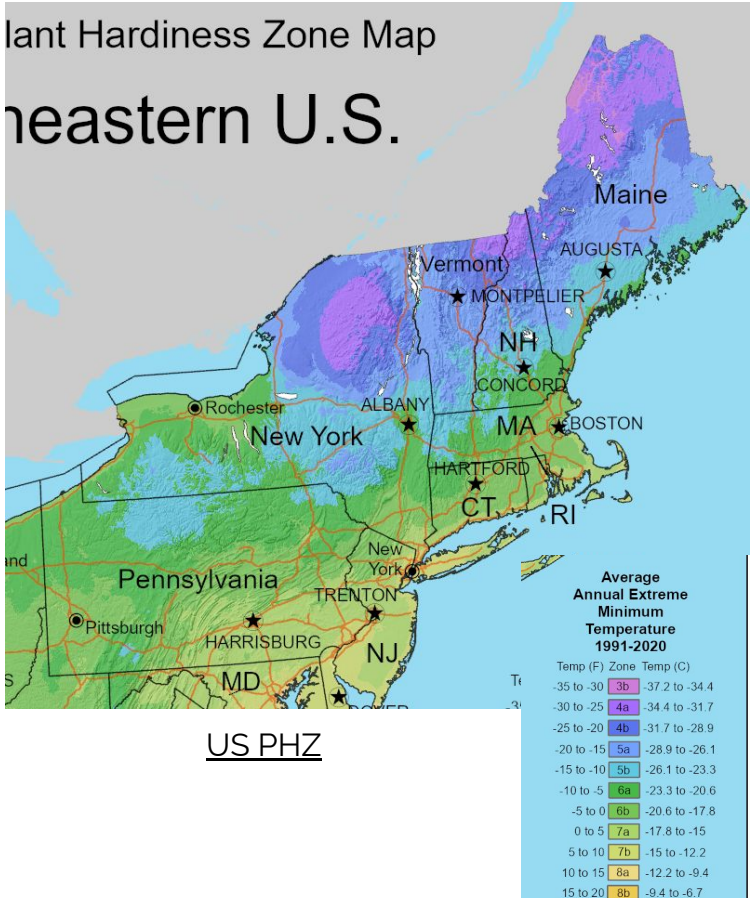

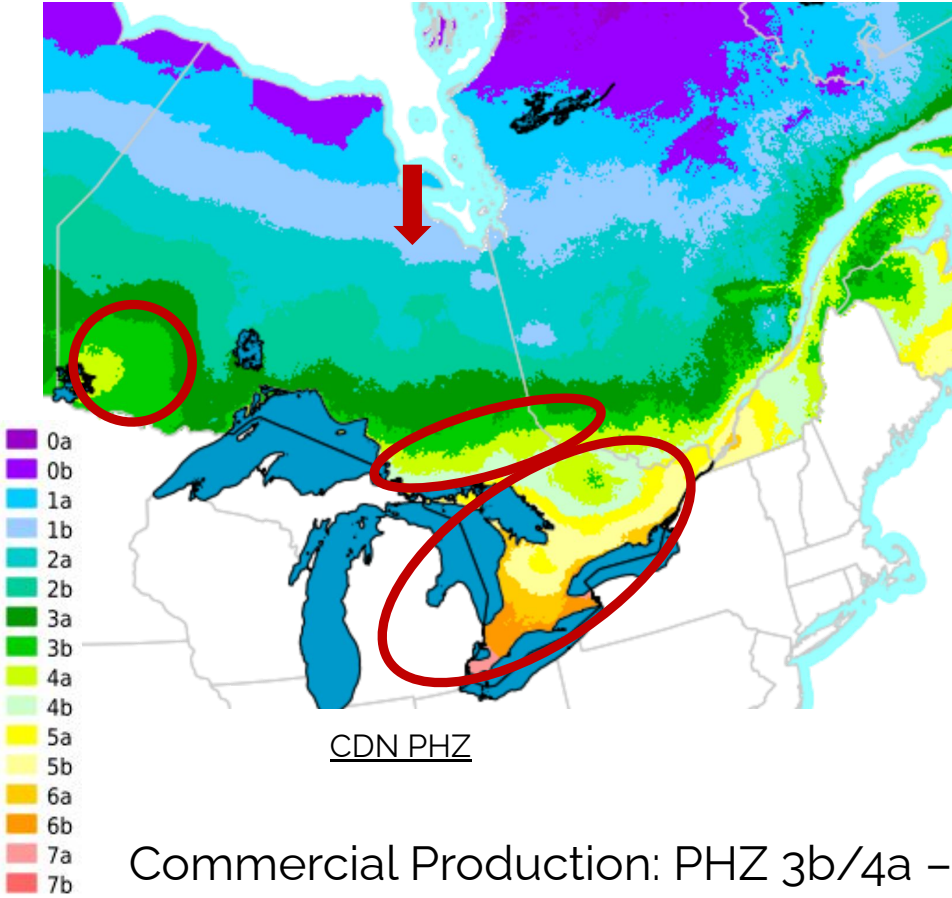

A photograph of a field with rows of young green plants, likely soybeans, growing in sandy soil. The plants are in the foreground and middle ground, with a line of trees in the background under a clear blue sky. The text 'Let's talk' and 'Agronomics' is overlaid in white on the upper part of the image.

Let's talk 'Agronomics'

1. Establishment

Location, Location, Location

Location & Site Preparation

- Plant hardiness zone 1, most commercial production zone 3 and up.
- All soil types; avoid saturated soils
- pH: 5-8 (6-7 best)
- Prepare site at least 1 year in advance (including a soil test)
- Control perennial weeds and grasses!
- Mulch (Plastic, Fabric, Wood Chips, Hemp)
- Install irrigation system

www.haskap.ca

795haskap.ca

www.haskapa.com
(Nova Scotia)

Planting Stock & Field Setup

- Transplants from tissue culture / licenced propagators where possible
- Prices (variety/quantity/availability dependent):
 - TC ~\$3.50-7/plant CDN
 - 1 yr old potted plant ~\$8.50-13/plant CDN
- ~2-3 years to established plants for regular harvest (using 1 year old plug plants)
- Spacing – Depends on harvest format and equipment
 - 4-6.5' (1.25 - 2 m) between plants
 - 10-15' (3-4.5 m) between rows
 - ~600-1100 plants/acre

Variety Selection

- Important for the market

Genetics: Russia; Japan; Kuril Islands, USA, Canada

Characteristics:

- Bloom (early, mid, late, very late)
- Ripening (early, mid, late)
- Winter hardiness (hardy vs. sensitive)
- Flavour (sweet, sour, bitter, variable)
- Plant height (short vs. tall)
- Plant architecture (bushy vs. tall)
- Harvest ease
- Berry Size
- Berry firmness
- Berry Shape
- Etc.

Recent Breeding Efforts & Varieties

Dr. Bob Bors,
University of Saskatchewan

- 10 Cultivars including: 'Borealis', 'Tundra', 'Indigo' series ('Gem', 'Treat', 'Yum'), 'Honeybee', 'Aurora', 'Boreal' series ('Blizzard', 'Beauty', 'Beast')

www.researchgate.net/profile/Bob-Bors

Dr. Maxine Thompson,
Oregon State University

- 10 Cultivars including: 'Tana', 'Chito', 'Kawai', 'Keiko', 'Taka'.

Haskap Variety Evaluations

From Montana State University Trials:

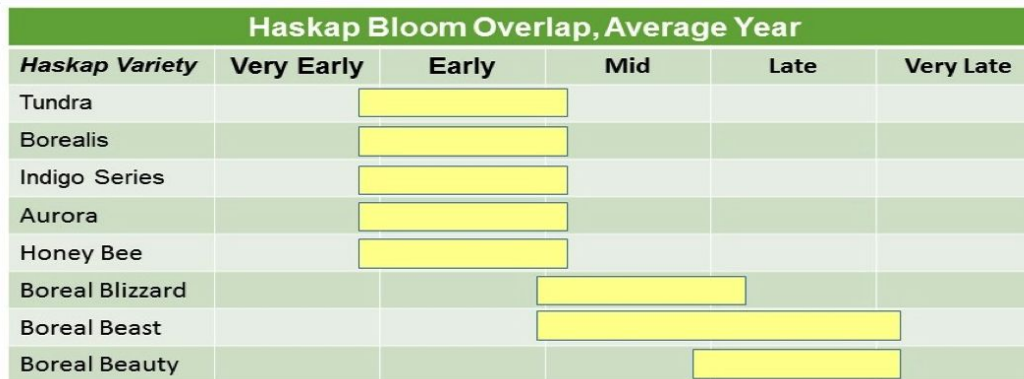

“Aurora' and 'Borealis' [UofSk varieties] produced large berries, were easy to harvest, and demonstrated excellent flavor. Many of the varieties sourced from Oregon State University [Maxine Thompson] showed strong yields and good flavor. However, these varieties may be best suited for small scale plantings due to their tendency to be difficult to harvest.”

Variety	Berry Weight (g)	Berry Info	Bush Info	Additional Notes
Tundra	1.5	Sweet/Tart Early Very firm	Medium ht Spreading	Mild flavour Spreading-bushy Easy to harvest
Borealis	1.6	Sweet/Tangy Early Hides fruit	Medium ht Thick	Home garden use Difficult to harvest
Indigo Treat	1.4	Sweet Early	Medium ht Bushy	Good flavour (sweet-tangy) and berry quality Easy to harvest
Indigo Gem	1.3	Tangy/sweet Early	Medium ht. Bushy	
Indigo Yum	1.3	Tangy/Sweet Early	Medium ht. Bushy	
Honey Bee	1.9	Tart Early Good for wine	Very Tall Productive	
Aurora	2.2	Sweet Early Low acid	Tall Upright Open	Excellent flavour, berry size, and berry quality Very easy to harvest
Boreal Blizzard	2.8	Sweet Mid-season Low acid	Tall Upright Bushy	
Boreal Beast	1.9	Excellent Late	Tall Bushy	
Boreal Beauty	2.6	Excellent Very late	Tall Upright	

Cross Pollination & Variety Compatibility Planning

Suggested Production Varieties		Possible Pollinizer Varieties								
		Russian Varieties	Tundra	Borealis	Indigo Series	Aurora	Honeybee	B. Blizzard	B. Beauty	B. Beast
	Tundra	OK	Bad	Bad	Bad	Good	Good	OK	Poor	Bad
	Indigo Series (Treat, Gem, Yum)	OK	Bad	Bad	Bad	Good	Good	OK	Poor	Bad
	Aurora	OK	Good	Good	Good	Bad	Good	Bad	OK	Bad
Boreal Series	B. Blizzard	Poor	Ok	Ok	Ok	Bad	Ok	Bad	Good	Poor
	B. Beauty	Bad	Poor	Poor	Poor	Poor	Ok	Good	Bad	Good
	B. Beast	Bad	Bad	Bad	Bad	bad	Bad	Poor	Good	Bad

Considerations for Field Setup: Pollinizer & Production Varieties

Scheme 1	Scheme 2	Scheme 3																																																																																																																								
<table border="1"> <tr><td>X</td><td>P</td><td>X</td><td>P</td><td>X</td></tr> <tr><td>X</td><td>P</td><td>X</td><td>P</td><td>X</td></tr> <tr><td>X</td><td>P</td><td>X</td><td>P</td><td>X</td></tr> <tr><td>X</td><td>P</td><td>X</td><td>P</td><td>X</td></tr> <tr><td>X</td><td>P</td><td>X</td><td>P</td><td>X</td></tr> <tr><td>X</td><td>P</td><td>X</td><td>P</td><td>X</td></tr> </table>	X	P	X	P	X	X	P	X	P	X	X	P	X	P	X	X	P	X	P	X	X	P	X	P	X	X	P	X	P	X	<table border="1"> <tr><td>X</td><td>P</td><td>X</td><td>X</td><td>P</td><td>X</td></tr> <tr><td>X</td><td>P</td><td>X</td><td>X</td><td>P</td><td>X</td></tr> <tr><td>X</td><td>P</td><td>X</td><td>X</td><td>P</td><td>X</td></tr> <tr><td>X</td><td>P</td><td>X</td><td>X</td><td>P</td><td>X</td></tr> <tr><td>X</td><td>P</td><td>X</td><td>X</td><td>P</td><td>X</td></tr> <tr><td>X</td><td>P</td><td>X</td><td>X</td><td>P</td><td>X</td></tr> </table>	X	P	X	X	P	X	X	P	X	X	P	X	X	P	X	X	P	X	X	P	X	X	P	X	X	P	X	X	P	X	X	P	X	X	P	X	<table border="1"> <tr><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td></tr> <tr><td>X</td><td>P</td><td>X</td><td>X</td><td>P</td><td>X</td><td>X</td><td>P</td><td>X</td></tr> <tr><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td></tr> <tr><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td></tr> <tr><td>X</td><td>P</td><td>X</td><td>X</td><td>P</td><td>X</td><td>X</td><td>P</td><td>X</td></tr> <tr><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td><td>X</td></tr> </table>	X	X	X	X	X	X	X	X	X	X	P	X	X	P	X	X	P	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	P	X	X	P	X	X	P	X	X	X	X	X	X	X	X	X	X

X	X	X	X	X	X	X	X	X																																																																																																																		
Two equally desirable varieties that can pollinate each other	Variety X is more desired than its pollinator variety	Using a pollinator that is not very desirable																																																																																																																								

X= Producing variety; P = Pollinator variety

(Source: Dr. Bob Bors, University of Saskatchewan, SK)

But...how do pollinators work the plants?

P	X	X	X	P	X	X
X	P	X	X	X	P	X
X	X	P	X	X	X	P
X	X	X	P	X	X	X
P	X	X	X	P	X	X
X	P	X	X	X	P	X
X	X	P	X	X	X	P
X	X	X	P	X	X	X
P	X	X	X	P	X	X

Bees generally work along a row, not between rows. Incorporate pollinizer plants within a row if compatible for marketing purposes (flavour, harvest timing, firmness, etc.)

A wide-angle photograph of a nursery or agricultural field. The foreground and middle ground are filled with numerous small, green, bushy plants spaced out on a light-colored, sandy or silty soil. In the background, there is a dense line of taller green plants, possibly corn or a similar crop, under a clear, bright blue sky. The overall scene is well-lit, suggesting a sunny day.

Fertility

Fertility Guidelines for Haskap Grown in Ontario

There are currently no Ontario fertility recommendations for haskap. The following tables for nitrogen (N), phosphorus (P), potassium (K) and lime applications are guidelines only and are provided for reference based on similar common crops and published research on haskap in other jurisdictions (note: lime, phosphorus and potassium should always be applied according to a soil test).

Nitrogen (N):

Apply fertilizer in split applications starting just prior to bud break continuing to mid-July or at the end of fruiting with no more than 25 kg N/ha in any one application. Refer to Table 1 for season total nitrogen application guidelines for haskaps based on plant density and age.

Do not exceed 85 kg of actual nitrogen per ha per season regardless of number of plants per ha. The following are an-

- No official Fertility Recommendations
- Start with ~80-100 kg/ha (~70-90 lb/ac) actual N split in 2 spring applications and tailor needs from there
- P & K always based on a soil test

Nitrogen Fertility and Yield

Yield (g) of 3-Year Old 'Aurora' Plants (Second Year in Field) by Nitrogen Fertilizer Rate (kg/ha)

Nitrogen Fertility & Berry Weight (Size)

Berry weight (g) of 3-Year Old 'Aurora' plants by Nitrogen Fertilizer Rate (kg/ha)

cv. 'Aurora' in 2024
3 year old plants

Harvesting & Expected Yields

Scale: small scale (hand picked) vs. large scale (mechanical harvesting for processing)

Expected Yields

~ 2.5-4.5 lbs/plant in established plantings (3+ years old)

Location	PHZ	Varieties	Yield Range
Saskatchewan	3b/4a	BTI's	200-1100 g/plant 0.4-2.4 lbs/plant
Ontario	6b	BTI's (Borealis, Tundra, I. Treat, I. Gem)	200-1200g/plant 0.4-2.6 lbs/plant
		Aurora (1 st harvest on 3 yr old plants)	~1 lb/plant High end 1.5 lb/plant
Montana Kalispell	5b	BTI's (Borealis & I. Gem)	3.7-4.9 lbs/plant
		Aurora	3.9 lbs/plant
		Solo, 41-75, 85-19	3.9-6.7 lbs/plant
Montana Corvallis	5b	BTI's (Borealis & I. Gem)	1.2-8.8 lbs/plant
		Aurora	1.2-7.4 lbs/plant
		Solo, Chito, Keiko, Taka, Kawai, Tana, 85-19	2-14.9 lbs/plant

Note: Yields presented are for various aged plants 3 years or older; cannot directly compare yields between sites as presented in this table; use as guideline only
